

Are your well screens and casings approved? Make sure you are compliant!

Boode PVC well screens and casings are the only PVC screens and casings approved under Regulation 31 by the Secretary of State. We manufacture compliant products to the highest standards using advanced materials to give outstanding performance.

Make sure you are using suppliers with approved products.

The Private Water Supplies Regulations state that products used in private water supplies must only be those permitted under Regulation 31 of the Water Supply (Water Quality) Regulations.*

Your clients, the wider public and the DWi put the highest priority on safety and quality when it comes to drinking water.

"Regulation 31 ensures that water suppliers, when producing and distributing drinking water, only use products and substances that do not cause any detrimental effects on the safety or quality of the drinking water" (from the DWi website)

Our products are the only PVC well screens and casings approved under Regulation 31.

We've invested significantly in them to combine safety and quality with the best possible performance at competitive prices.

Using Boode well screens and casings means you can give your customers the best possible service - **and** be compliant.

DWi, KIWA and WRAS approved, Boode PVC well screens and casings are:

- Safe, legal & compliant for installation in boreholes & water wells for potable water abstraction.
- Cylindrical perfection attained due to slowest possible rate of extrusion.
- Manufactured to achieve superior maximum tensile strength and collapse resistances.
- Specified & preferred by Consultants & Hydrogeologists.
- Produced from highest quality lead free PVC compounds, combined with very low tolerance parameters.
- Corrosion free, lightweight and easy to handle.
- Competitively priced.
